DETAILED ACTION

Allowable Subject Matter

Claims 1-32 are allowed.

The following is an examiner's statement of reasons for allowance: each of claims 1 and 32 having a position-controller configured to hold said swingable holder such that said retractable optical element remains on said optical axis when said retractable lens is in said operational state, said position-controller further configured to rotate said swingable holder about said pivot such that said retractable optical element retracts to a position which deviates from said optical axis when said linearly movable ring, together with said swingable holder, retracts toward said plane; and a movement direction setting device, provided on said support plate and said linearly movable ring, and setting the direction of movement of said at least one support plate in a plane substantially orthogonal to said optical axis when said at least one of said first and second movement force is applied on said at least one support plate by at least one of said rotation of said first rotatable shaft and said rotation of said first rotatable shaft and said rotation of said second rotatable shaft when said support plate fixing device is in said released state, in combination as claimed cannot be made inherent nor obvious by the prior art of record. JP 58162914 cited in the United Kingdom Search Report also fail to make inherent or obvious the claimed invention since they fail to show the above stated claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
